## **DETAILED ACTION**

### ***Specification***

1. The disclosure is objected to because of the following informalities: pg.4, line 2: delete "folow" and insert --follow--, line 3: delete "heasd" and insert --head--; pg.6, line 10: delete "simply" and insert --simply--.

Appropriate correction is required.

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: Claim 10 recites "no more than 1 inch wide". However, the specification recites that the module is rarely more than 1 inch wide.

### ***Claim Objections***

3. Claim 10 is objected to because of the following informalities: line 2: delete "areea" and insert --area--. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 6-8 and 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 6-8 recite a method step involved with the claimed apparatus. In this case, the method steps do not have patentable

significance in the apparatus claim. With regard to claim 10, it is not clear what structural element is recited by the term "its".

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Benevento, Jr. et al. (Benevento, U.S. 5,354,607). Benevento discloses the invention substantially as claimed. Benevento teaches a forehead clearing apparatus comprising a pair of wedge shaped modules 32,33 wherein each of the pair is further comprised of a hook and pile strip 62,63, the strip having a means for permanently bonding to a headband of a hat or cap, the hook strip permanently bonded to the module via sewing. The pile strip 72,73 is sewn and/or glued on the cap such that the module extends over the headband portion of the cap as shown in Figure 1. The modules having a soft corner which can be a bevel or a rounded corner and includes a semi-rigid sponge-like core with a soft outer shell material. The module can be integrated into hats or caps at the manufacturing site if desired. Column 4, lines 34-38 recite that the modules are tapered in shape to define air passage channels 40 between modules. However, Benevento doesn't teach that the module is ½ an inch at its thickest part and no more than one inch wide. Applicant's specification doesn't provide criticality for these

particular dimensions and as such, these dimensions could have been arrived at through routine experimentation. The modules appear to be no more than 1 inch wide and ½ inch thick. These dimensions would ensure that the cap still fits the wearer's head properly, and that the modules provide the desired effect.

### ***Conclusion***

8. The prior art made of record on the attached PTO-892, and not relied upon, is considered pertinent to applicant's disclosure.
